SOLUTIONS

CUTTING-EDGE SOFTWARE COMPANY

About Databotics

Databotics is a cutting-edge software company committed to developing intelligent, scalable solutions that drive digital transformation. With deep expertise in automation, AI, and custom development, we empower businesses to achieve operational excellence, data-driven decision- making, and future readiness.

Our Track Record

100+

Projects Delivered

Empowering businesses with innovative solutions that drive real-world success.

1000+

Clients Served

Building long-term relationships with diverse industries, ensuring success at every step.

10+

Years of Expertise

Adecade-plus of hands-on experience in crafting cutting-edge solutions and navigating challenges.

100+

Innovators

A talented team of design thinkers, committed to turning your ideas into reality with creativity and precision.

Our Values

- Driveing Innovation
- Uncompromising integrity
- Relentless Dedication
- Powerful Teamwork
- Exceptional Quality
- Client-First Approach

Why Us?

Commitment to Work

We are fully committed to our clients' business objectives and deliver top-quality solutions that align with their needs.

Client Satisfaction

Our primary goal is to achieve 100% satisfaction through full transparency, ensuring we meet every client expec-tation.

Expert Team

With a team of highly skilled develop-ers and marketers, we help your busi-ness reach its full potential and beyond.

Affordable Solutions

Our flexible service packages are designed to meet your specifi c needs and business goals, all within your budget.

Timely Delivery

Punctuality is one of our key values. We pride ourselves on delivering projects promptly, ensuring you stay on track.

Best Support

We offer top-notch support and main-tenance services that our clients love, ensuring continued success after project completion.

Our Cutting-Edge Services

Comprehensive Product Engineering

- Agile Product Development
- UI/UX Strategy
- Dedicated Team
- Support & Maintenance
- Technology Consulting

Business Transformation

- Robotic Process Automation
- BI & Reporting Services
- AI & ML
- Mobile App & Web Analytics

Complete Digital Transformation

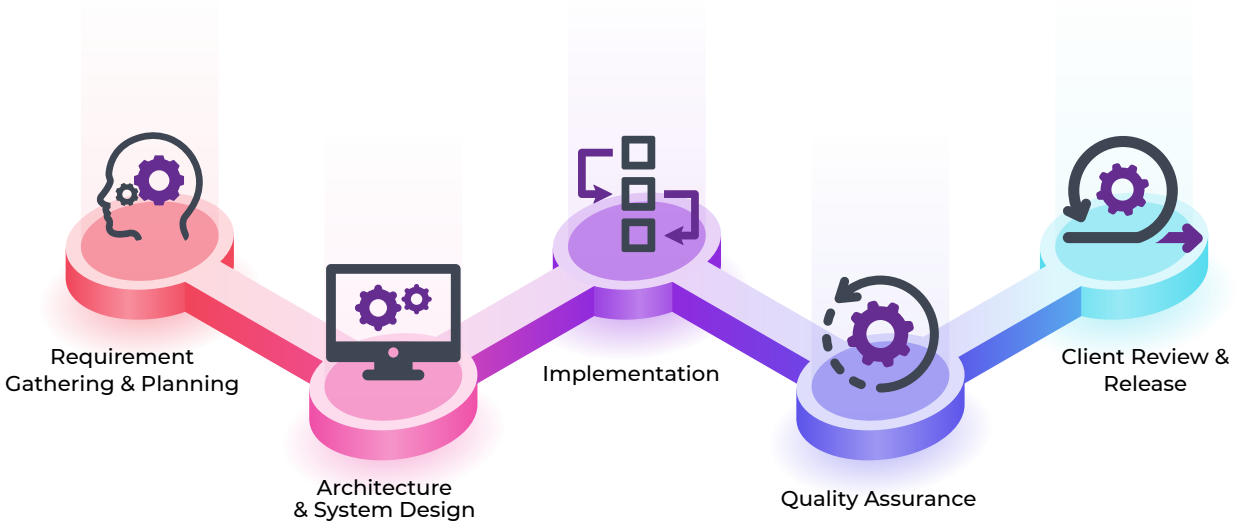

- Web Application Development
- Mobile App Development
- Custom Software Development
- Cloud Migration Service
- DevSecOps
- Legacy Application Migration

Our Strategic Development Process

We work closely with customers at every stage of the development cycle to deliver tailored solutions through the Software Development Life Cycle (SDLC). Using Agile Methodology, we continuously evolve solutions with collaboration and feed-back

Product Details

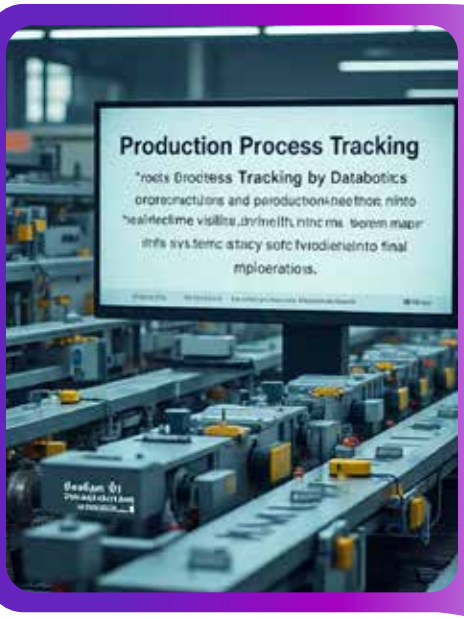

Warehouse Management System (WMS)

Our Warehouse Management System is designed to streamline end-to-end inventory and logistics operations across industries. Powered by artificial
intelligence, the system enables businesses to optimize warehouse space, track inventory in real time, and reduce operational costs. Whether you manage a single warehouse or a multi-location network, our WMS brings centralized control and intelligent automation to your fi ngertips.
The WMS can be tailored for industry-specifi c requirements—such as tracking raw materials in manufacturing or auto-replenishing products in retail chains. Integrated with barcode and RFID systems, the platform ensures accurate stock management, order processing, and audit readiness.

Production Process Tracking

Production Process Tracking by Databotics offers manufacturers and production units real-time visibility into their operations. This system maps every stage of production, from raw material intake to fi nal assembly, and provides instant data on output, downtime, and defects.
With built-in analytics and alerts, the platform helps identify inefficiencies, reduce production bottlenecks, and improve throughput. It also integrates with existing machinery and IoT devices to capture shop-fl oor data automatically, ensuring accurate performance tracking.

Key Features:

- Workfl ow mapping for each production stage
- Live dashboards for production metrics
- Downtime logging and reason analysis
- IoT integration for real-time machine data
- Operator and shift-wise performance analytics

AI-Based Monitoring Solutions

Our AI-based monitoring solutions utilize advanced machine learning algorithms and data analytics to provide actionable insights, optimize performance, and drive informed decision-making. By leveraging real-time data and predictive modeling, our solutions enable businesses to proactively identify trends, anomalies, and opportunities for improvement.

Key Features:

- AI-based CCTV anomaly detection
- Biometric or RFID-based entry/exit tracking
- Real-time alert system for unauthorized access
- Incident reporting and audit trail generation
- Integration with centralized security dashboards

Event Management Solution

Our Event Management Solution is a versatile tool for organizers managing corporate events, expos, or residential society functions. It automates critical aspects like attendee registration, entry control, amenity booking, and post-event analytics. The system allows smooth guest movement through QR or biometric access while providing organizers with full control over capacity and scheduling. Amenity control modules help manage facility reservations, ensuring optimal use of spaces like halls, stages, or booths. Built-in reporting tools offer insights into footfall, user engagement, and vendor participation helping enhance future event planning.

Key Features:

- Entry management via QR, RFID, or biometric scanning
- Visitor pre-registration and real-time tracking
- Amenity booking and scheduling controls
- Session-wise attendance tracking
- Engagement and usage analytics dashboards

Asset Management System

The Asset Management System by Databotics simplifi es the tracking, allocation, and lifecycle management of physical and digital assets. Whether it's machinery, IT hardware, or consumables, each asset is tagged, tracked, and monitored across departments and locations. The platform gives teams complete visibility over asset location, status, user history, and depreciation. It ensures asset accountability, maintenance scheduling, warranty management, and end-of-life processing—all from a single interface. Custom reports provide valuable insights for procurement planning, cost optimization, and regulatory compliance.

Key Features:

- Asset tagging using QR codes or RFID
- Centralized inventory of all assets by type/location
- Maintenance scheduling and alerts
- Lifecycle tracking with depreciation and warranty logs
- Custom reports on usage, value, and transfers

Power BI Integration & Dashboards

Databotics offers Power BI integration with all its core products, enabling powerful data visualization and business intelligence. Custom dashboards transform raw data into intuitive charts, maps, and KPIs—delivering insights across sales, operations, production, and inventory in one glance. Our team works with your key departments to identify data sources and build a unifi ed reporting framework. With drill-down fi lters, automated reports, and dynamic visuals, decision-makers can identify trends, isolate ineffi ciencies, and forecast with accuracy.

Key Features:

- Real-time dashboards tailored for business functions
- Integration with Databotics systems and external data
- KPI monitoring, trend tracking, and custom visualizations
- Role-based access for teams and leadership
- Scheduled reports and forecasting tools

Contract Management System

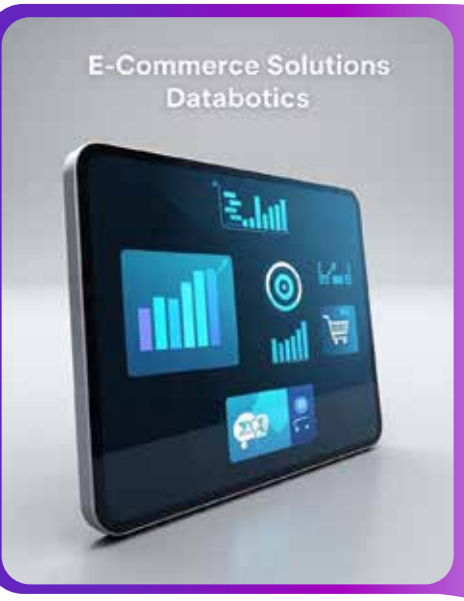

The Contract Management System helps businesses streamline the creation, negotiation, and storage of all types of contracts—vendor agreements, service-level agreements, employment contracts, and more. It ensures version control, renewal alerts, and compliance with legal standards. All contracts are securely stored and accessible through a search-able dashboard with audit trails for approvals, changes, and digital signatures. This system signifi cantly reduces manual tracking errors and legal risks while speeding up the contract lifecycle.

Key Features:

- Centralized digital repository for all contracts
- Version history and change tracking
- Approval workflows and user-based permissions
- Auto-reminders for renewals and expiry dates
- E-signature integration and clause library

E-Commerce Solutions

Databotics offers comprehensive e-commerce solutions for businesses looking to build, scale, or streamline their online sales. From beautifully designed storefronts to seamless backend opera-tions, our platform enables real-time inventory updates, order management, and customer engagement—all from a centralized dashboard. With multi-seller marketplace capabilities, payment gateway integrations, and mobile responsiveness, we provide everything needed to launch a profi table digital storefront. Advanced features like loyalty systems, abandoned cart recovery, and marketing automation further boost customer retention and conversions.

Key Features:

- Custom-branded online store with mobile optimization
- Real-time stock, order, and shipping sync
- Secure payment and logistics integration
- Loyalty programs and discount management
- Admin panel with analytics and reports

Custom Software Development

We understand that every business is unique. That's why Databotics provides fully customized software development services—built from the ground up to align with your specifi c workfl ows, goals, and technology environment. Whether you need

- Frontend Stacks
- Android Development
- Windows Desktop Development
- Backend Stacks
- iOS Development
- MacOS Desktop Development
- Databases
- Cross-Platform Mobile App Development
- Cross-Platform Desktop Development

Using agile methodologies and modern tech stacks, we build solutions that are fl exible, future-ready, and easy to maintain. We focus not just on delivery, but also long-term performance, scalability, and support—ensuring your investment delivers lasting value.

Key Features:

- End-to-end design, development, and deployment
- User-centric interface with modular architecture
- Cloud-native, mobile, and cross-platform apps
- Integration with existing tools and APIs
- Long-term maintenance and scalability

Our Happy Clients

We are proud to serve a diverse clientele across industries, geographies, and scales. From streamlining warehouse logistics for large manufacturers to powering e-commerce platforms for niche retailers, Databotics has consistently delivered value and innovation.

Testimonials

Databotics Solutions transformed the way we handle quality assurance at Synthine. Their Quality Assurance Module provided us with complete control and visibility across every aspect of our QA operations — including SOP management, training, audits, and defect tracking — all unified under one intuitive platform. The real-time dashboards and analytics have streamlined our entire QA lifecycle, improving efficiency and compliance. The platform is robust, reliable, and perfectly customized to our workflows. Kudos to the Databotics team for their professionalism and deep understanding of QA and regulatory processes."

Sudheesh Babu,
QA Head-Synthine

Implementing the ERP system from Databotics Solutions was a game-changer for Froos. It seamlessly connected our departments — from inventory to finance — and provided us with accurate, real-time insights into our operations. Their team's support and commitment during deployment and after-go-live were exceptional. We now run more efficiently and make faster, data-driven decisions.

Jinu Joseph,
ERP Solution-Froos Pvt. Ltd.

We were struggling to track and maintain our growing list of assets until Databotics Solutions came in with their Asset Management System. The application has streamlined our asset lifecycle tracking, reduced manual errors, and improved accountability across departments. It's simple, powerful, and fits our business perfectly. Highly recommended

Suresh,
Asset Management System-
Skybertech

The AI-LAVE Application Tracker developed by Databotics Solutions has redefined how we monitor and analyze our AI workflows. The intelligence and automation it brings have saved us countless hours and improved our project turnaround times. Databotics truly understands how to merge innovation with practicality. It's been a pleasure partnering with them.
